

## How to electrify your Glass Cluster to become a Grape Lamp

---

### **Step 1 – Setting up the power cable inside the grape lamp**

1. Pass the power cable within the metallic ring situated on the top of the grape lamp (see picture 4 and 5)
2. Pull the power cable from the top to the middle of the grape lamp before
3. Insert the light bubble within the lamp socket and slightly pull the power cable from the ring on the top to adjust

Picture 5

### **Important information**

As totally made of mouth-blown glass, the grape Cluster is fragile. **To prevent any damage during transport**, the artisan always blows more bubbles than necessary so the bubbles have less space to move around and the Cluster is more compact.

As a result, you may find sometimes difficult to insert the light bubble inside the grape lamp.

No worry, the electrification is still possible. You will just need to remove one or two glass bubbles to create enough space within the grape lamp. Please refer to II **“INSTRUCTIONS –How to remove glass bubbles to insert the light bulb”**

### **OBS! Regarding reclamation for broken glass bubbles**

As totally made of mouth-blown glass, the grape Cluster is fragile. As indicated in order **to prevent any damage during transport**, the artisan always blows more bubbles than necessary, so the bubbles have less space to move around and the Cluster is more compact. **However, even if with this extra precaution, you might find broken glass bubbles (up to 5 pieces) when unpacking the grape lamp. This cannot be considered as reclamation. Please note that the artisan blows up to 10 glass bubbles extra.** Be insured that the visual effect of the Grape Cluster will always be astonishing even if you noticed broken pieces when delivered.

## II -INSTRUCTIONS How to remove Glass bubbles

### I. INSTRUCTIONS –How to remove glass bubbles to insert the light bubble

1. You will need to use a long pliers (see picture 8)
2. Choose one or two glass bubbles to remove, preferably situated within the central part of the grape lamp
3. Cut delicately the base of the glass bubble connecting it to the central metallic structure
4. Remove the glass bubble
5. Repeat the operation if needed to create more space (1 to 2 glass bubbles should be enough)

Picture 8

After removing the glass bubbles, you just need to process to the electrification as described in the first part of the instructions.

#### *Important information*

**Do not worry when removing the glass bubbles. The grape lamp is naturally designed to hide any space created either to insert the bubble light or in case of broken bubble glass. When removing the glass bubbles, all the other pieces will gently adjust making the entire lamp looks perfect.**

#### **How to expose the grape lamp**

The grape lamp can be either hung from the ceiling (make sure the room structure can support up to **9kg**) or nicely displayed upon a table or a console table.
